ORBITAL ELEMENTS SUBJECT INDEX

OMBITAL ELEMENTS		SUBJECT INDE
EVA space construction - Experience and fundamental	Remote orbital capture using an orbital maneuvering	Simulation-modeling tool for evaluation of space
maues p 144 A89-43721	vehicle equipped with a multibody grappling arm	talerobolic control strategies p 93 A89-5344
Engineering, construction, and operations in space; Proceedings of the Space '88 Conference, Albuquerque,	assembly (AD-A202780) p.53 N89-21018	Superfluid Helium Tanker (SFHT) study [NASA-CR-172110] p 84 N89-2018
NM, Aug. 29-31, 1968 p 15 A89-45726	Orbital maneuvering vehicle teleoperation and video	Columbus MTFF utilieation, phase B2X: Executive
Lunar caments/concretes for orbital structures p.206 A89-45737	data compression p 112 N89-22335	summary for main study [CUT-MBER-800-RP-220] p 189 N89-2264
Space truss construction studies p 137 A89-45784	Orbital Maneuvering Vehicle (DMV) remote servicing kit p 86 N89-24838	SIRTF Telescope Instrument Changeout and Cryoge
The role of a mobile transporter in large space structures	CABITAL MANEUVERS	Replenishment (STICCR) Study [NASA-CR-177980] p 140 N89-2351
assembly and maintenance p 92 A89-45790 Astrolectonics - An overview p 15 A89-45834	Tether deotht system - A prumising alternative	[NASA-CR-177380] p 140 N89-2351 Returned Solar Max hardware degradation stud
Solving the problem of joining composite structures in	(AIAA PAPER 89-1564) p 121 A89-40194 A thrusted sling in space - A tether-assist maneuver	results p 165 N89-2353
space p 16 A89-46064 Construction of large space power facilities	for orbit transfer p 134 A89-43395	The European in-orbit infrastructure ground segment p 191 N89-2434
[IAF PAPER ICOSP89-12-2] p 16 A89-46536	ORBITAL MECHANICS	MTFF user interfaces p 191 N89-2434
A modular propulsion system required for Space Station example:	Gravity gradient disturbances on rotating terhered systems in circular orbit	Hermes-MTFF rendezvous strategy and composit operations p 199 N89-2435
(AIAA PAPER 89-2613) p 79 A89-46962	[AIAA PAPER 89-1583] p 124 A89-40222	Senicing of the MTFF by Harmes
EVA design integration for Space Station assembly	Dynamics and control of two space platforms connected by a short tether p 128 A88-43340	p 192 N89-2436
[SAE PAPER 881542] p 146 A89-47328 On-orbit febrication of Space Station structures	Interaction of the Space Shuttle on-orbit autopilot with	MITFF flight operations phases p 182 NR9-2436 Manned interventions at the MITFF: Craw worklos
p 16 A89-48769	tether dynamics p 126 A89-43341	aspects p 192 NBS-2436
Passive control of alternative assembly configurations of Space Station Freedom	Tethsin - A dynamics simulation software package for tethered system p 128 A89-43344	Logistics aspects of Columbus servicing at the Spac Station p 192 NR9-2436
[AIAA PAPER 89-3435] p 46 A89-52535	Effect of attitude dynamics on 'teltier propulsion'	Attached Pressurized Module (APM) center for th
The Space Station Freedom evolution-phase -	p 132 A89-43362	Columbus attached pressurand module p 183 N89-2437
Crew-EVA demand for robotic substitution by task primitive p 117 A89-S3456	Space debris - Origin, evolution and collision mechanics p 152 A89-43895	The Harmas robot arm (HERA) p 183 N89-2439
Talerstolic research for in-space structural assembly	OMBITAL RENDEZVOUS	Harmes crew role p 194 NBS-2440
and servicing p N A89-53831 A definition study of the on-orbit assembly operations	High-precision optoelectronic measurement system for three-dimensional determination of religitive attitude and	The human role in space (THURIS) applications study Final briefing
for the outboard photovoltaic power modules for Space	position p 72 A89-35347	[NASA-CR-183590] p 203 N89-2479
Station Freedom [NASA-TM-102008] p 147 N89-20171	Operational complexities of real tether systems in	Disconnects for spacecraft servicing applications p.148 NRS-2483
Vehicle for Space Transfer and Recovery (VSTAR),	(AIAA PAPER 89-1598) p 125 A89-40226	Othlai Maneuvering Vehicle (CNhV) remote servicin
volume 1	An on-orbit control law for the matted CMFV and	M p 86 N89-2483
